Cabin Air Filter

Driven by
Quality

Fresh air comes naturally with DENSO Cabin Air Filters

DENSO's aftermarket **Cabin Air Filter** programme offers all the benefits of advanced, original equipment quality from the trusted **DENSO** brand. As the world-leading HVAC specialist and the world's second largest automotive OEM supplier, **Cabin Air Filters** are the perfect addition to our growing aftermarket family. Providing you with more choice, and your customers with a more comfortable drive.

Let **DENSO** excellence make a world of difference to your business.

Fresh Air Comes Naturally with a DENSO Cabin Air Filter

About Our Range

When travelling by car it's vital to know that the air you're breathing in is pure and clean. To eliminate the smells, irritants and pollution that could enter your car from the road, you need a Cabin Air Filter you can trust.

• OE quality

DENSO's Cabin Air Filters offers aftermarket customers a wide range of filters designed and manufactured to the highest possible standard – the same Original Equipment (OE) quality that vehicle manufacturers choose for their new cars.

• HVAC know-how

As the world's number one OE developer of Heating, Ventilation and Air Conditioning (HVAC) systems, and the world's second largest automotive components brand, DENSO really understands Cabin Air Filter technology.

• Choice

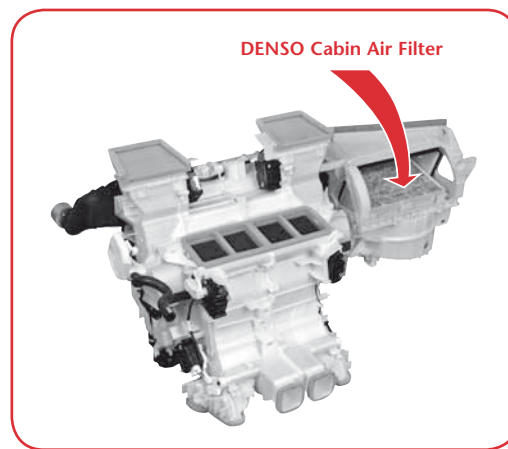

Engineered to OE standards DENSO's Cabin Air Filter programme offers:

- 237 part numbers
- More than 750 applications
- 90% coverage of the European and Asian car parcs.

• Particle and Combination filter technology

The DENSO programme includes both Particle Filters and Combination Filters. Our multi-layer filtration systems work to neutralise exhaust gases and other pollutants whilst trapping and holding pollen and dust particles, ensuring air reaching the cabin is clean and safe to breathe. Each air filter reference is individually designed to suit the needs of different vehicles types. What's more, DENSO filters work without causing a drop in air pressure that could potentially damage a vehicle's HVAC systems.

Offering outstanding protection, quality, technology and choice, DENSO Cabin Air Filters add up to a better driving experience.

HVAC system

Better by design

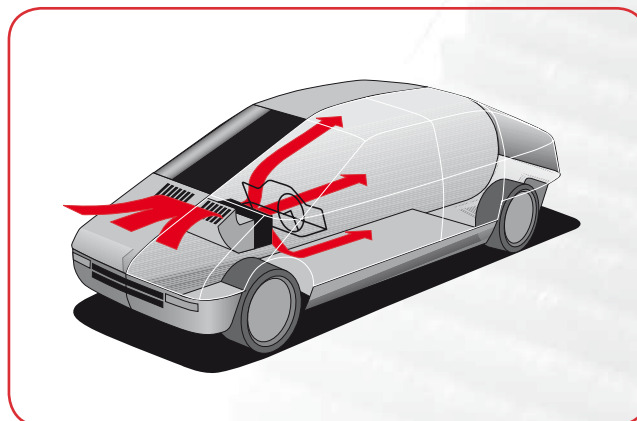

Quality matters

- Without effective cabin air filtration motorists and their passengers can be affected by a variety of potentially harmful air pollutants entering the comfort zone of their car. Pollutants can include dust, soot, pollen, noxious gases and abrasion particles from brakes and tyres. If not eliminated, these can affect eyes, nose and lungs – causing health problems, irritation and discomfort.

- Because DENSO Cabin Air Filters offer state-of-the-art, OE quality they address the problem of in-car pollution extremely effectively. They are also subject to our stringent quality control procedures at every stage of production. That not only means a more comfortable driving experience, but better protection against health hazards.

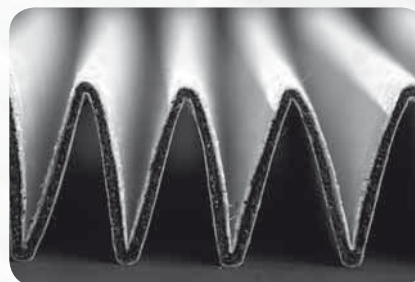

Superior Technology

- DENSO's understanding of HVAC systems means our Cabin Air Filters feature advanced filter technology to ensure a healthier in-car environment. The fleece material we use contains up to five individual layers which trap almost 100% of harmful pollutants and particles, holding them well away from the vehicle interior where they cannot be breathed in. DENSO filters have extremely accurate fitting mechanisms sealing the filter to the housing, increasing filtration efficiency. Their efficient design also protects the HVAC system, benefiting the health of every passenger, and people with allergies and asthma in particular.

Car Air-Flow

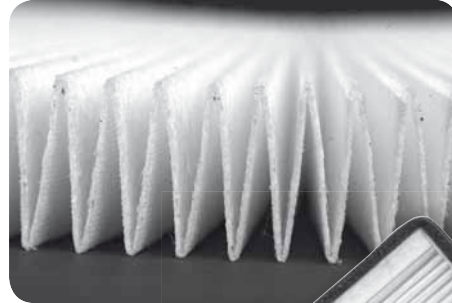

Cabin Air Filter

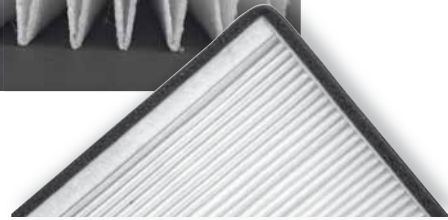

Filter Types

Particle Filters

Particle Filters from DENSO offer exceptional protection from dust, soot, pollen and particles. Featuring multi-layer fleece material to efficiently remove dust and solid matter, they also have a large dust holding capacity and minimise air flow resistance.

Particle Filters

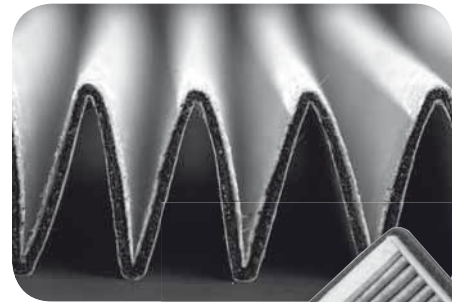

Combination Filters

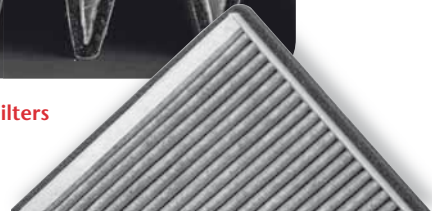

DENSO Combination Filters offer all of the blocking, electrostatic and nanofibre technologies of our Particle Filters; trapping almost 100% of dust, pollen and solid particles before they can be inhaled.

But thanks to an additional, activated charcoal layer located inside the filtration material our Combination Filters offer an added advantage.

The result is a cabin atmosphere that always stays fresh, pleasant and healthy to breathe.

Combination Filters

How do they work?

Particle Filters

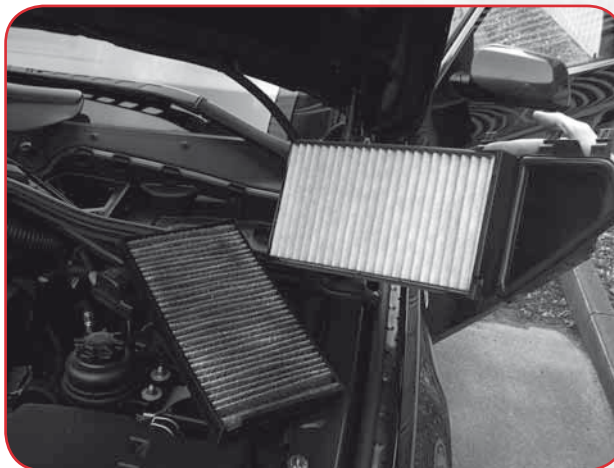

- Removal by blocking – particles are prevented from entering the cabin by a close meshed, non-woven filter layer. Particles trapped are then deposited into the filter housing
- Removal by electrostatics – small particles with permanent or temporary charges are attracted and held back by electrostatic interaction
- Nanofibre coatings – A layer of fine fibres is spun into the filter media, preventing pressure drop

Combination Filters

- They also eliminate unpleasant – and often harmful – gases and smells.
- The 'adsorbition' process of this special carbon layer ensures that gases such as chemical air pollution and ozone containment, as well as smells such as manure and diesel fumes, are effectively neutralised – preventing them from reaching passengers inside the car.

Replacement

Although most of today's new vehicles are already fitted with Cabin Air Filters, over time the filter becomes clogged with dust and dirt that can eventually be infested by bacteria, mildews and micro-organisms. This makes the filter a potential source of allergens as well as reducing filtration effectiveness and electrostatic charge. There can even be an increase in pressure drop, stressing the HVAC system.

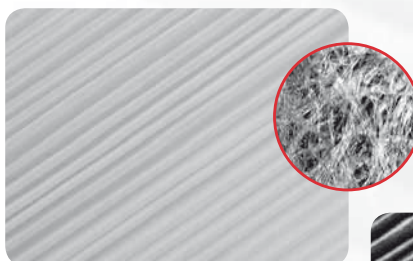

Replacement Sense

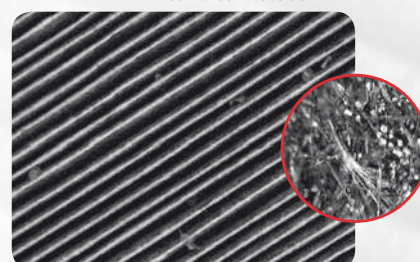

- Get ready for demand** - More than 80% of all European passenger cars are already fitted with Cabin Air Filters, and the trend is rising. This makes timely part replacement an increasingly important and high volume responsibility for the aftermarket.
- Health education** - Drivers are rarely aware of the importance of regular Cabin Air Filter replacement – or the consequences of delay. Take time to educate your customers. Prompt action will help to protect their own health, and the well-being of their passengers.
- In city and country** - Solid matter, particles, noxious gases and unpleasant smells affect rural as well as urban areas, making Cabin Air Filter replacement important in any environment.

To maintain a fresh, safe in-car environment DENSO recommends replacing the Cabin Air Filter at least once a year, every (10,000) – (15,000) km, or as specified by the vehicle manufacturer. Only regular replacement ensures the continued filtration efficiency and good HVAC performance that guarantee a more hygienic, comfortable car interior.

New filter

Filter after 15.000 km

Frischlucht ist mit Fahrgastraum-Luftfiltern von DENSO selbstverständlich

Über unser Sortiment

Bei Autofahrten muss man sich unbedingt darauf verlassen können, dass die eingeatmete Luft frisch und rein ist. Damit von außen keine Gerüche, Reizstoffe und Fremdkörper ins Fahrzeuginnere eintreten können, wird ein Fahrgastraum-Luftfilter benötigt, auf den Verlass ist.

• OE-Qualität

DENSO bietet Kunden im Aftermarket ein breites Spektrum von Fahrgastraum-Luftfiltern, die alle gemäß höchsten Standards entwickelt und produziert werden – in der gleichen Originalausrüstungsqualität (OE), wie sie von Fahrzeugherstellern für Neufahrzeuge spezifiziert wird.

• Expertise im Bereich HLK

Weltweit führend in der Entwicklung von Heizungs-, Lüftungs- und Klimaanlageanlagen (HLK) und als weltweit zweitgrößter Zulieferer von automotiven Markenprodukten verfügt DENSO über ein umfassendes Verständnis der Technologie, die für Fahrgastraum-Luftfilter eingesetzt werden muss.

• Auswahl

Entsprechend OE-Standards gefertigt, bietet das Fahrgastraum-Luftfilterprogramm von DENSO:

- 237 Artikelnummern
- Mehr als 750 Anwendungsfälle
- 90%ige Abdeckung für europäische und asiatische Fahrzeuge

• Die Technologie der Partikel- und Kombifilter

DENSO hat sowohl Partikelfilter wie auch Kombifilter in seinem Programm. Unser mehrlagiges Filtrationssystem arbeitet dergestalt, dass Abgase und andere Schadstoffe neutralisiert werden, während Pollen und Staubpartikel abgefangen und festgehalten werden, was gewährleistet, dass die ins Fahrzeug eintretende Luft frisch und rein ist und ohne gesundheitliche Beeinträchtigung eingeatmet werden kann. Jedes Filtermodell ist spezifisch darauf ausgelegt, den Erfordernissen des zugehörigen Fahrzeugtyps zu entsprechen. Und außerdem setzen Filter von DENSO dem Luftstrom keinen Widerstand entgegen, was sonst möglicherweise zu Schäden am HLK-System eines Fahrzeugs führen könnte.

Fahrgastraum-Luftfilter von DENSO bieten ein hervorragendes Maß an Schutzwirkung, Qualität, Technologie und Wahlmöglichkeit und verbessern damit das Fahrerlebnis insgesamt.

HVAC system

Besser durch Design

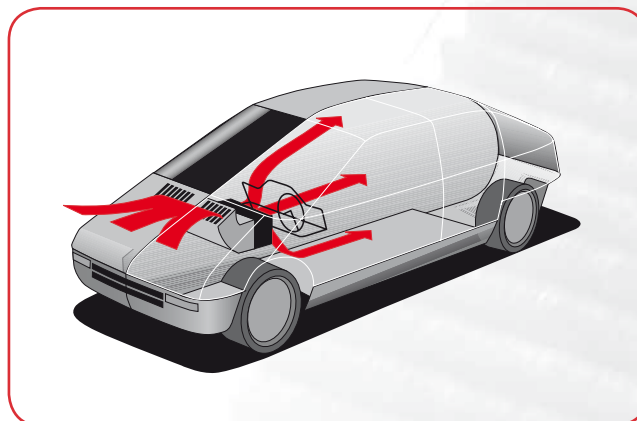

Qualität zählt

- Ohne effektive Filtration der in das Fahrzeuginnere eintretenden Luft, sind sich Fahrer und Beifahrer möglicherweise zu potenziell schädlichen Luftverunreinigungen ausgesetzt, die in den Komfortbereich des Fahrzeugs Eingang finden. Hierzu können Staub, Ruß, Pollen, schädliche Gase und Abriebteilchen von Bremsbelägen und Reifen gehören. Ohne Rückhaltung können diese in Augen, Nase und Lungen gelangen – und damit gesundheitliche Probleme, Reizungen und Unbehagen hervorrufen.

- Da Fahrgastraum-Luftfilter von DENSO auf dem Stand der Technik befindliche OE-Qualität bieten, lösen sie das Problem der Luftverschmutzung im Fahrzeuginneren mit hoher Wirksamkeit. Und da strikte Qualitätskontrollen in jedem Produktionsstadium zum Einsatz gelangen, wird nicht nur das Fahrerlebnis komfortabler, sondern zugleich die Gesundheit in höherem Maße geschützt.

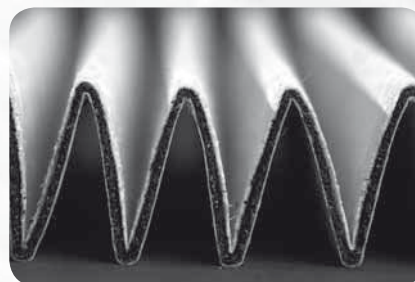

Überlegene Technologie

- Das Knowhow von DENSO auf dem Gebiet der HLK-Systeme bringt mit sich, dass unsere Fahrgastraum-Luftfilter mit einer fortschrittlichen Filtrationstechnologie arbeiten, die ein gesünderes Innenraumklima gewährleistet. Das von uns verwendete Faserschichtmaterial besteht aus bis zu fünf Einzelschichten, die beinahe 100 % der schädlichen Verunreinigungen und Partikel abfangen, und entfernt vom Fahrgastraum anlagern, wo sie nicht eingeatmet werden können. (An dieser Stelle Bild der Filterlagen zeigen?) Filter von DENSO besitzen extrem genau ausgeführte Passungen, die eine Abdichtung des Filters mit dem Filtergehäuse herstellen und damit die Wirksamkeit der Filtration erhöhen. Ihr effizientes Design schützt zudem das HLK-System, was der Gesundheit aller Fahrzeuginsassen zugute kommt, insbesondere von Personen, die an Allergien oder Asthma leiden.

Car Air-Flow

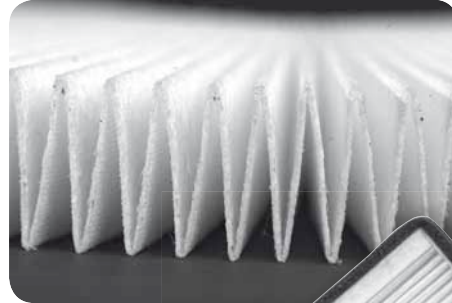

Cabin Air Filter

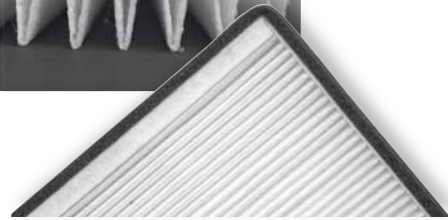

Filterarten

Partikelfilter

Partikelfilter von DENSO bieten herausragenden Schutz vor Staub, Ruß, Pollen und Schwebstoffen. Für die effektive Filtration von Staub und Festkörperteilchen arbeiten diese Filter mit einem mehrlagigen Faserschichtmaterial, sind in der Lage, große Staubmengen zurückzuhalten, und setzen dem Luftstrom ein Mindestmaß an Widerstand entgegen.

Partikelfilter

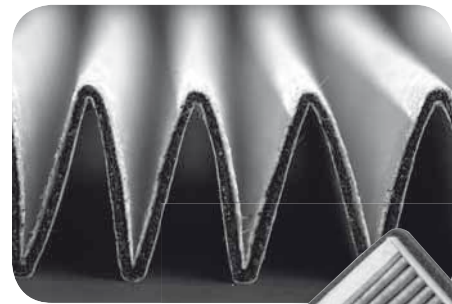

Kombifilter

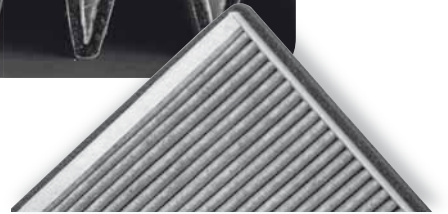

Kombifilter von DENSO arbeiten ebenfalls mit Entfernung durch Rückhaltung und elektrostatische Interaktion sowie einer Nanofaser-Beschichtung wie unsere Partikelfilter und halten damit fast 100 % an Staubteilchen, Pollen und Festkörperteilchen zurück, ehe diese eingeatmet werden können.

Aber dank einer zusätzlichen Lage Aktivkohle im Filtermedium bieten unsere Kombifilter einen weiteren Vorteil: Sie eliminieren auch unschöne – und oft schädliche – Gerüche und Gase.

Ergebnis ist ein Innenraumklima, das jederzeit frisch und angenehm ist und ohne gesundheitliche Beeinträchtigung eingeatmet werden kann.

Kombifilter

How do they work?

Partikelfilter

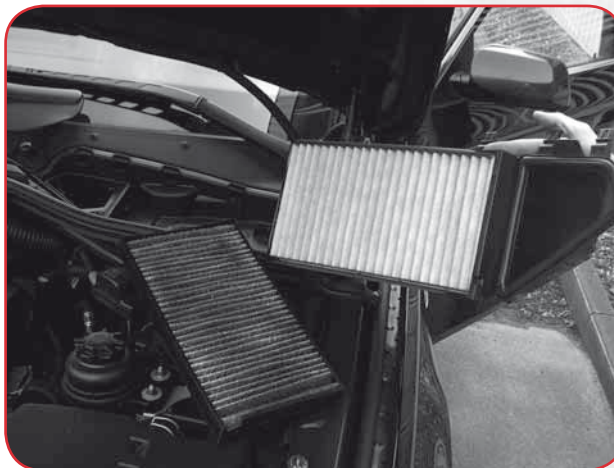

- Entfernung durch Rückhaltung – Partikel werden durch eine feinmaschige Faservlieslage daran gehindert, in den Fahrgastraum einzutreten. Die zurückgehaltenen Partikel werden dann im Filtergehäuse abgelagert.
- Entfernung durch Elektrostatik – Kleinstpartikel mit permanenter oder zeitweiliger Aufladung werden angezogen und durch elektrostatische Interaktion zurückgehalten.
- Nanofaser-Beschichtung – Eine Lage sehr feiner Fasern ist in das Filtermedium eingewirkt und verhindert einen Druckabfall über den Filter.

Combination Filters

- They also eliminate unpleasant – and often harmful – gases and smells.
- The 'adsorption' process of this special carbon layer ensures that gases such as chemical air pollution and ozone containment, as well as smells such as manure and diesel fumes, are effectively neutralised – preventing them from reaching passengers inside the car.

Austausch

Die meisten heutigen Neufahrzeuge sind schon mit Fahrgastraum-Luftfiltern ausgerüstet. Im Laufe der Zeit setzen sich diese Filter mit Staub und Schmutz zu, worauf sich schließlich Bakterien, Schimmel und andere Mikroorganismen ansiedeln. Damit wird ein solcher Filter zur Quelle möglicher Allergene, seine Filtrationswirksamkeit wird herabgesetzt, seine elektrostatische Aufladung nimmt ab. Zudem kann er dem Luftstrom höheren Widerstand entgegensetzen – und Druckabfälle über den Filter belasten das HLK-System.

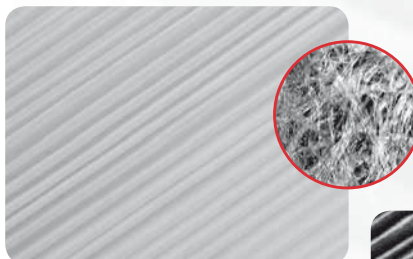

Austausch macht Sinn

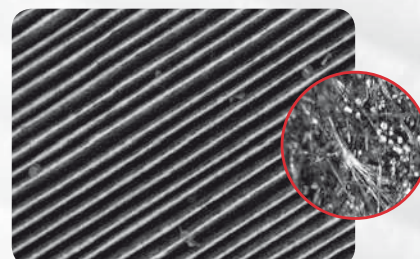

- **Bereiten Sie sich auf die Nachfrage vor** – Mehr als 80 % aller europäischen Personenkraftwagen sind mit Fahrgastraum-Luftfiltern ausgerüstet – Tendenz steigend. Damit wird der zeitgerechte Teileaustausch zu einer stetig wichtigeren und ein hohes Volumen repräsentierenden Verantwortlichkeit für den Aftermarkt.
- **Gesundheitsberatung** – Autofahrer sind sich selten der Wichtigkeit eines regelmäßigen Austauschs von Fahrgastraum-Luftfiltern bewusst – geschweige denn der Konsequenzen zu langer Wechselintervalle. Nehmen Sie sich die Zeit, Ihre Kunden zu beraten. Promptes Handeln hilft, deren eigene Gesundheit und das Wohlbefinden ihrer Passagiere zu schützen.
- **In der Stadt ebenso wie auf dem Land** – Feststoffe, Partikel, schädliche Gase und unangenehme Gerüche kommen in der Stadt ebenso wie auf dem Land vor und machen den Austausch von Fahrgastraum-Luftfiltern unabhängig vom Einsatzumfeld des Fahrzeugs wichtig.

Um frisches und sicheres Klima im Fahrzeuginneren aufrechtzuerhalten, empfiehlt DENSO, den Fahrgastraum-Luftfilter zumindest einmal jährlich, alle 10.000 – 15.000 km oder gemäß Angaben des Fahrzeugherstellers auszutauschen. Nur der regelmäßige Austausch stellt anhaltende Filtrationswirksamkeit und gute Leistung des HLK-Systems sicher, was bessere Hygiene und höheren Komfort im Fahrgastraum gewährleistet.

Neuer Filter

Filter nach 15.000 km

L'air frais circule tout naturellement avec un filtre à air d'habitacle DENSO

A propos de notre gamme

Lorsque vous circulez en voiture, il est essentiel de savoir que l'air que vous respirez est pur et sain. Afin d'éliminer les odeurs, les irritants et les polluants de la route susceptibles de s'infiltrer dans votre voiture, vous avez besoin d'un filtre à air d'habitacle fiable.

• Qualité d'équipement d'origine

Les filtres à air d'habitacle DENSO proposent aux clients du marché de la rechange toute une série de filtres à air d'habitacle conçus et fabriqués selon les normes extrêmement élevées – la même qualité d'équipements d'origine que celle choisie par les constructeurs automobiles pour leurs véhicules neufs.

• Savoir-faire en matière de HVAC

En tant que numéro un mondial en matière de développement d'équipements d'origine des systèmes HVAC (Chauffage, ventilation et climatisation), et en tant que deuxième grande marque mondiale de composants automobiles, DENSO maîtrise parfaitement toute la technologie des filtres à air d'habitacle.

• Vaste choix

Conçue selon les normes d'équipements d'origine, la gamme de filtres à air d'habitacle DENSO propose :

- 237 références
- Plus de 750 applications
- 90% de couverture des parcs automobiles européens et asiatiques.

• Technologie des filtres à particules et combi

La gamme DENSO comprend des filtres à particules et des filtres combi. Nos systèmes de filtration multicouches permettent de neutraliser les gaz d'échappement et autres polluants tout en piégeant et en retenant les pollens et les particules de poussière, ce qui garantit que l'air arrivant dans l'habitacle est pur et sain à respirer. Chaque référence de filtre à air est conçue individuellement pour répondre aux besoins des différents types de véhicules. De plus, les filtres DENSO fonctionnent sans provoquer de chute de pression de l'air ce qui risquerait, éventuellement, d'endommager les systèmes HVAC du véhicule.

Présentant une protection, une qualité, une technologie et un choix exceptionnels, les filtres à air d'habitacle DENSO contribuent à améliorer votre sensation de conduite.

HVAC system

Priorité à la conception

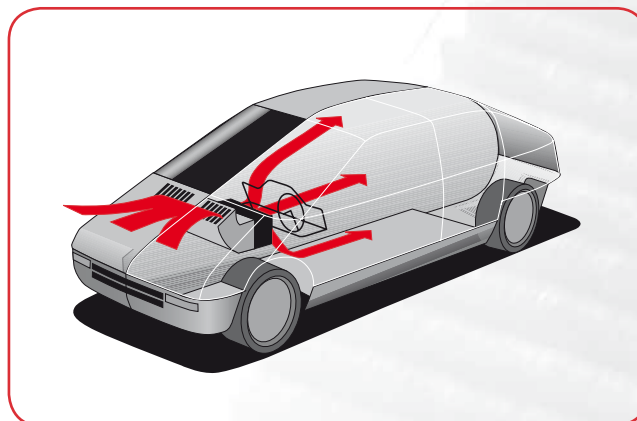

Qualité irréprochable

- Sans une filtration efficace de l'air de l'habitacle, les automobilistes et les passagers risquent d'être affectés par toute une variété de polluants de l'air potentiellement nocifs, qui s'infiltrent dans la zone de confort de leur voiture. Parmi ces polluants, se retrouvent de la poussière, de la suie, des pollens, des gaz toxiques et des particules d'abrasion provenant des freins et des pneus. S'ils ne sont pas éliminés, ceux-ci risquent d'affecter les yeux, le nez et les poumons, et de provoquer des problèmes de santé, des irritations et des malaises.

- Les filtres à air d'habitacle DENSO, résultats concrets d'une qualité OE à la pointe de la technologie, règlent de façon extrêmement efficace le problème de la pollution dans le véhicule. Ils sont aussi soumis à nos procédures de contrôle qualité rigoureuses à chaque stade de la production. Résultat : non seulement une sensation de conduite dans un confort supérieur, mais une meilleure protection contre les risques de santé.

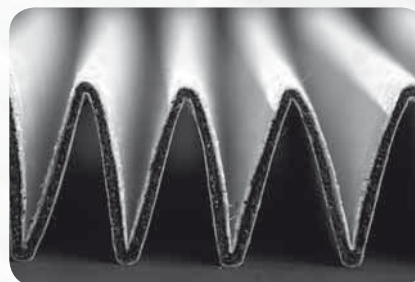

Technologie supérieure

- DENSO maîtrisant totalement les systèmes HVAC, nos filtres à air d'habitacle bénéficient d'une technologie de filtration avancée afin de garantir un environnement plus sain dans le véhicule. Le molleton utilisé se compose d'un maximum de cinq couches individuelles qui piègent pratiquement 100% des polluants et des particules nocifs, les retenant à l'écart de l'habitacle où ils ne seront pas respirés. (Show filter layer pic here?) Illustration des couches du filtre) Les filtres DENSO sont livrés avec des mécanismes de pose extrêmement précis qui étanchéisent le filtre sur le boîtier, augmentant donc la performance de la filtration. Leur conception judicieuse sauvegarde aussi le système HVAC, protégeant la santé de tous les passagers et en particulier, de tous ceux qui souffrent d'allergies et d'asthme.

Car Air-Flow

Cabin Air Filter

Types de filtres

Filtres à particules

Les filtres à particules DENSO offrent une protection exceptionnelle contre la poussière, la suie, le pollen et les particules. Composés d'un molleton multicouches afin d'éliminer efficacement les poussières et les corps solides, ils présentent aussi une grande capacité de retenue des poussières et minimisent la résistance au flux d'air.

Filtres à particules

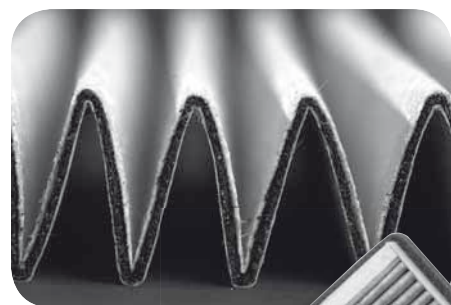

Filtres combi

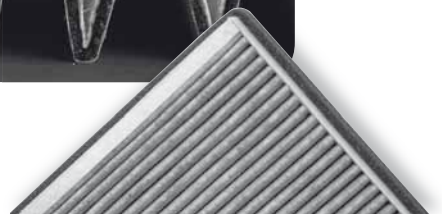

Les filtres combi DENSO réunissent toutes les technologies : blocage, électrostatique et nanofibres de nos filtres à particules. Ils piègent près de 100% de poussière, pollens et particules solides avant que ceux-ci ne soient inhalés.

Grâce à une couche de charbon actif supplémentaire située à l'intérieur de la matière de filtration, nos filtres combi présentent un avantage supérieur. Ils éliminent aussi les gaz et les odeurs désagréables et souvent nocifs.

Il en résulte dans l'habitacle une atmosphère qui reste toujours fraîche, agréable et saine à respirer.

Filtres combi

Comment fonctionnent-ils ?

Filtres à particules

- Élimination par blocage : une couche de filtrage non tissé à mailles serrées empêche les particules de s'infiltrer dans l'habitacle. Les particules piégées sont alors déposées dans le boîtier du filtre
- Élimination par électrostatique : les petites particules à charges permanentes ou temporaires sont attirées et retenues par interaction électrostatique
- Enduits de nanofibres : une couche de fibres fines est tissée dans le milieu de filtration, afin d'empêcher une chute de pression

Filtres combi

- Ils éliminent aussi les gaz et les odeurs désagréables et souvent nocifs.
- Grâce aux qualités d'absorption de cette couche de charbon spéciale, les gaz tels que les polluants d'air chimiques et les contaminants d'ozone, ainsi que les mauvaises odeurs (fumier, fumées de gazole) sont efficacement neutralisés ce qui les empêche d'arriver jusqu'aux passagers de la voiture.

Remplacement

Bien que la plupart des véhicules neufs actuels soient déjà équipés de filtres à air d'habitacle, au fil du temps, le filtre risque de se colmater de poussières et d'impuretés qui peuvent en dernier ressort être infestés de bactéries, moisissures et micro-organismes. Ceci fait du filtre une source potentielle d'allergènes et peut aussi réduire l'efficacité de la filtration et les charges électrostatiques. Il peut se produire une chute de pression plus importante imposant des contraintes sur le système HVAC.

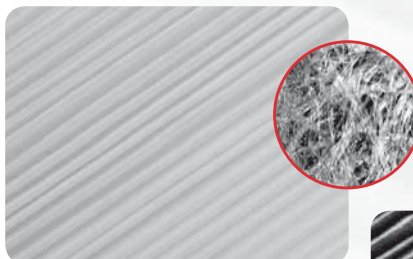

Logique du remplacement

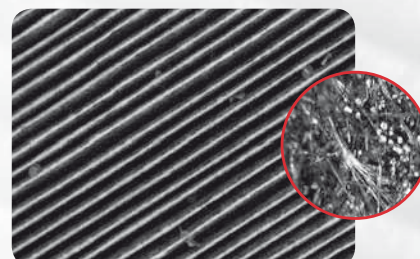

- Préparez-vous à répondre à la demande** – Plus de 80% de toutes les voitures de tourisme européennes sont déjà équipées de filtres à air d'habitacle, et cette tendance va continuer à augmenter. Par conséquent, pour le marché de la rechange, le remplacement des filtres constitue une opportunité de plus en plus intéressante et un volume potentiel important.
- Éducation sanitaire** – Les conducteurs sont rarement informés de l'importance que joue le remplacement régulier des filtres à air d'habitacle, ou des conséquences d'un retard dans ce remplacement. Prenez le temps de l'expliquer à vos clients. Un remplacement effectué à temps contribuera à protéger leur santé et celle de leurs passagers.
- En ville et à la campagne** - Corps solides, particules, gaz nocifs et mauvaises odeurs affectent l'environnement rural ainsi que l'environnement urbain, ce qui fait qu'il est important de remplacer les filtres à air d'habitacle dans n'importe quel environnement.

Pour maintenir un environnement frais et sûr dans l'habitacle, DENSO recommande de remplacer le filtre à air d'habitacle au moins une fois par an, tous les (10 000) à (15 000) km, ou aux intervalles prescrits par le constructeur automobile. Ce n'est qu'en le remplaçant à intervalles réguliers que peuvent être garanties l'efficacité de la filtration continue, et la bonne performance du système HVAC, et donc un habitacle plus hygiénique et plus confortable.

Filtre neuf

Filtre au bout de 15 000 km

El aire fresco entra naturalmente con un Filtro de aire de cabina DENSO

Nuestra gama

Cuando se viaja en automóvil, es vital saber que el aire que se respira es puro y limpio. Para eliminar los olores, las partículas irritantes y la contaminación que pueden entrar desde la carretera, conviene usar un Filtro de aire para cabina fiable.

• Calidad original

DENSO ofrece a los clientes una gama de filtros de cabina creados y fabricados según las normas más exigentes y con la misma calidad que los fabricantes de vehículos escogen para sus nuevos automóviles.

• Tecnología de HVAC

Porque es el principal fabricante mundial de sistemas de calefacción, ventilación y aire acondicionado (HVAC), y la segunda marca más importante del mundo de componentes para la industria automotriz, DENSO conoce muy bien la tecnología de Filtros de aire para cabina.

• Selección

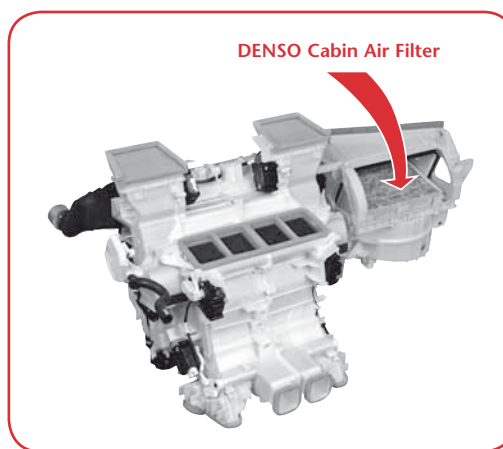

El programa de Filtros de aire de cabina DENSO, creado conforme a los estándares originales ofrece:

- 237 referencias
- Más de 750 aplicaciones
- Un 90% de cobertura de los parques de vehículos de Europa y Asia.

• Tecnología de filtros de partículas y de combinación

El programa DENSO comprende tanto filtros de partículas como de combinación. Nuestros sistemas de filtración por numerosas capas neutralizan los gases de escape y otros contaminantes al tiempo que atrapan y retienen el polen y las partículas de polvo, asegurando así que el aire que entra en el habitáculo sea limpio y seguro para respirar. Cada referencia del filtro de aire se diseña individualmente para que responda a los requisitos de los distintos tipos de vehículos. Es más: los filtros DENSO funcionan sin producir ningún descenso de la presión del aire que podría quizá dañar los sistemas de HVAC del vehículo.

Porque ofrecen protección, calidad, tecnología y elección sobresalientes, los Filtros de aire de cabina DENSO contribuyen a que la experiencia de conducir sea aún mejor.

HVAC system

Mejor diseño

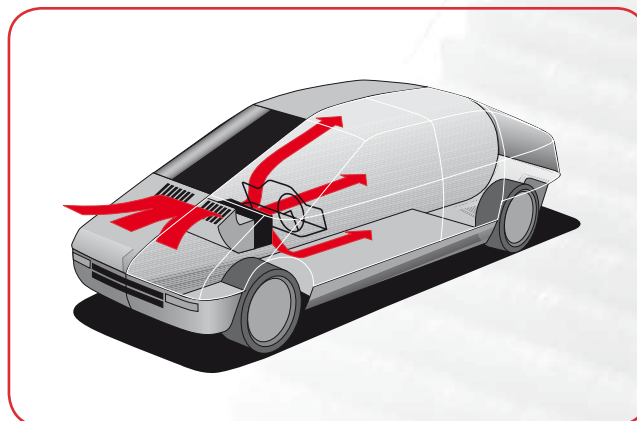

La calidad importa

- Sin una filtración de aire eficaz, los conductores y sus pasajeros pueden verse afectados por diversos contaminantes atmosféricos peligrosos en potencia que invaden la comodidad de su vehículo. Dichos contaminantes pueden ser polvo, hollín, polen, gases nocivos o partículas abrasivas de frenos y llantas. Si no se eliminan, esas partículas pueden afectar ojos, nariz y pulmones y ocasionar problemas de salud, irritación y molestias.

- Al ofrecer la más moderna calidad de los equipos originales, los filtros de cabina DENSO resuelven el problema de la contaminación en el coche de manera eficazísima. También les sometemos a nuestros estrictos procedimientos de control de calidad en cada fase de la producción, lo que significa no solo una experiencia de conducción más cómoda sino una protección mejor ante los peligros contra la salud.

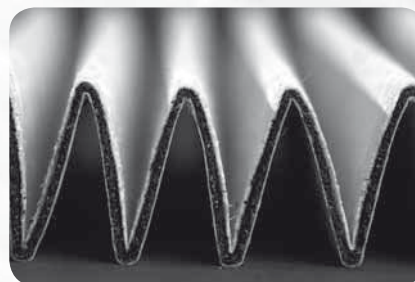

Tecnología superior

- El que DENSO conozca a fondo los sistemas HVAC significa que nuestros Filtros de aire de cabina cuentan con una avanzada tecnología de filtrado que asegura un ambiente más higiénico en el automóvil. El material lanoso que usamos consta de hasta cinco capas distintas que atrapan casi el 100% de partículas y contaminantes nocivos, manteniéndolos fuera del interior del vehículo, donde no se puedan respirar. Los filtros DENSO tienen unos mecanismos de colocación sumamente precisos que sellan el filtro en su armazón, aumentando la eficacia de la filtración. Asimismo, su eficiente diseño protege los sistemas de HVAC para bien de todos los pasajeros, sobre todo de quienes sufren alergias y asma.

Car Air-Flow

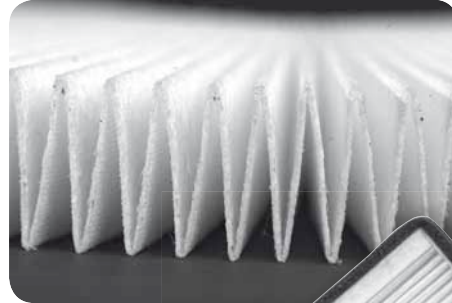

Cabin Air Filter

Tipos de filtros

Filtros de partículas

Los filtros de partículas DENSO ofrecen una protección excepcional contra polvo, hollín, polen y partículas. Su material compuesto de lana de muchas capas elimina con eficacia el polvo y la materia sólida, tiene gran capacidad para retener el polvo y minimizar la resistencia al flujo de aire.

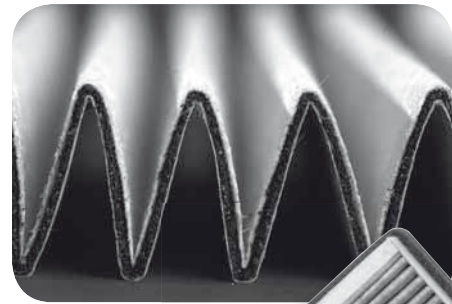

Filtros de partículas

Filtros de combinación

Los Filtros de combinación DENSO ofrecen todas las tecnologías de bloqueo, electrostática y de nanofibras de nuestros Filtros de partículas, capturando casi el 100% del polvo, polen y partículas sólidas antes de poderlas inhalar.

Pero gracias a una capa adicional de carbon vegetal activado, situada dentro del material filtrante, nuestros filtros de combinación ofrecen una ventaja extra.

El resultado es que el ambiente del habitáculo está siempre fresco y agradable y es sano para respirar.

Filtros de combinación

¿Cómo funcionan?

Filtros de partículas

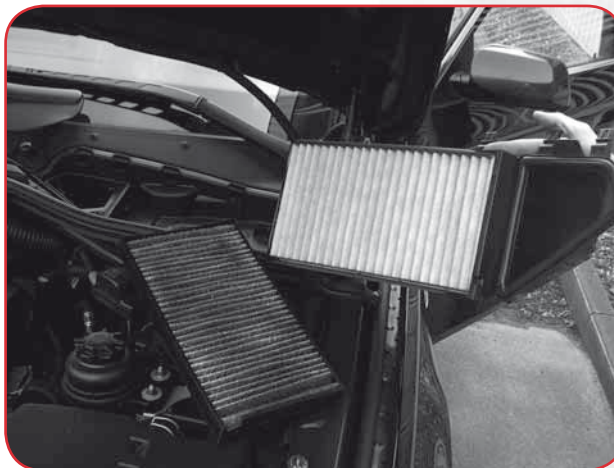

- Eliminación por bloqueo – una capa de filtro no tejida de malla tupida, evita que las partículas entren en el habitáculo. Las partículas retenidas se depositan luego en el armazón del filtro.
- Eliminación por sistema electrostático – pequeñas partículas con cargas permanentes o temporales son atraídas y retenidas por interacción electrostática
- Recubrimientos de nanofibra – En el interior del filtro se hila una capa de fibras finas que evitan que la presión caiga

Filtros de combinación

- También eliminan gases y olores desagradables y a menudo nocivos.
- El proceso de absorción de esta capa especial de carbón asegura que se neutralicen con eficacia gases como la contaminación atmosférica química y de la capa de ozono, además de neutralizar con eficacia olores como fiemo o diesel – evitando que lleguen a los pasajeros del vehículo.

Sustitución

Aunque la mayoría de los vehículos actuales ya cuentan con filtros de aire de cabina, con el tiempo el filtro queda lleno de polvo y suciedad y puede estar infestado de bacterias, hongos y microorganismos, hasta convertirse en una fuente posible de alérgenos, además de reducir la eficacia de la filtración y la carga electrostática. Incluso puede aumentar la caída de la presión, forzando el sistema de HVAC.

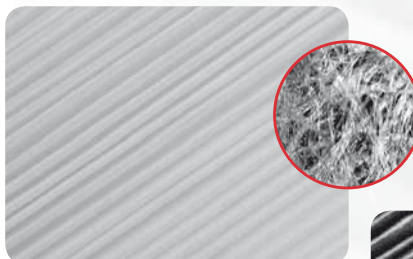

Cambiar es de sentido común

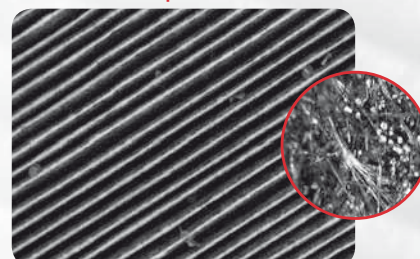

- Prepárese para la demanda en ciernes** – Más del 80% de todos los vehículos europeos de pasajeros ya cuentan con Filtros de aire de habitáculo y la tendencia va en aumento. Esto hace que el recambio de piezas oportuno sea una responsabilidad cada vez más importante y de gran volumen para el mercado posventa.
- Educación en higiene** – Los conductores rara vez se fijan en la importancia de cambiar periódicamente el filtro de aire de cabina– o de las consecuencias de retrasarlo. Dedique tiempo a educar a sus clientes. Una acción oportuna contribuirá a proteger la salud y el bienestar de sus pasajeros.
- En la ciudad y en el campo** – Las materias y partículas sólidas, los gases nocivos, los malos olores afectan lo mismo las zonas rurales que las urbanas, por lo que es importante cambiar el Filtro de aire de cabina

Para que el ambiente en el automóvil se mantenga fresco y seguro, DENSO recomienda cambiar el filtro al menos una vez al año, cada 15 000 km. o según lo especifique el fabricante del vehículo. Sólo con un cambio periódico se puede asegurar la eficacia continua de la filtración y el buen resultado del HVAC, lo que garantiza un interior del automóvil más cómodo e higiénico.

Filtro nuevo

Filtro después de 15 000 km.

Aria pura nella tua auto con i Filtri Abitacolo DENSO

La nostra gamma

Quando si viaggia in macchina è di fondamentale importanza che l'aria che si sta respirando sia pura e pulita.

Per eliminare gli odori, gli irritanti e gli inquinanti che potrebbero entrare, ti serve un Filtro Abitacolo su cui poter fare affidamento.

• Qualità di Primo Equipaggiamento

DENSO offre ai clienti dell'aftermarket un'ampia gamma di Filtri Abitacolo, progettata e realizzata secondo gli standard più elevati del mercato – con la stessa qualità di Primo Equipaggiamento che offriamo ai Costruttori che ci hanno scelto per le loro nuove vetture.

• Sistemi di Riscaldamento, Ventilazione e Condizionamento Il nostro know-how

A livello mondiale, DENSO è il primo costruttore di sistemi per il riscaldamento, la ventilazione e il condizionamento, il secondo marchio della componentistica automotive e, grazie a ciò, conosce perfettamente la tecnologia relativa ai Filtri Abitacolo.

• La nostra offerta

Progettato secondo gli standard imposti dal Primo Equipaggiamento, il programma relativo ai Filtri Abitacolo DENSO offre:

- 237 codici
- Più di 750 applicazioni
- Il 90% di copertura del circolante europeo ed asiatico.

• Tecnologia Particellare e a Filtri Combinati

Il programma DENSO include Filtri Particellari e Filtri Combinati. I nostri sistemi di filtrazione multistrato neutralizzano i gas di scarico e altre sostanze inquinanti, intrappolando e trattenendo il polline e le particelle di polvere, garantendo così un'aria pulita e respirabile nell'abitacolo.

Ogni referenza è studiata singolarmente per soddisfare i bisogni di ogni tipologia di veicolo. Inoltre, i filtri DENSO non provocano quelle cadute di pressione dell'aria che potrebbero danneggiare i sistemi di riscaldamento, ventilazione e condizionamento.

I filtri Abitacolo DENSO offrono protezione, qualità, tecnologia e una gamma fuori dal comune, migliorando il confort di guida.

Sistemi di riscaldamento, ventilazione e condizionamento

Una migliore progettazione

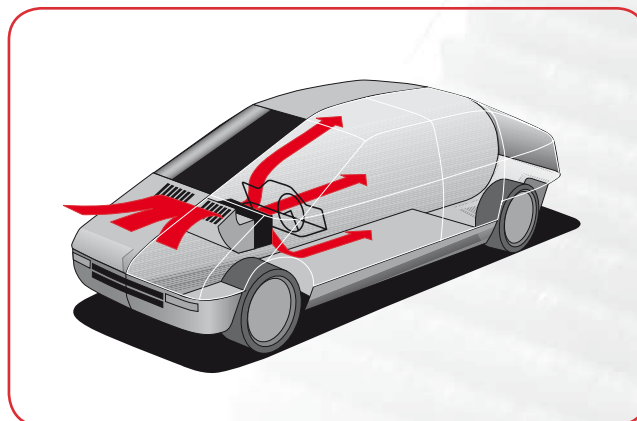

Prodotti di qualità

- Senza un efficace sistema di filtrazione nell'abitacolo, i conducenti e i loro passeggeri possono subire l'aggressione di una varietà di inquinanti potenzialmente dannosi. Gli inquinanti includono polveri, fuliggine, polline, gas nocivi e le particelle generate dall'attrito di pneumatici e freni. Se non vengono eliminati, questi possono danneggiare occhi, naso e polmoni – causando problemi di salute, irritazioni e disagi.

- I Filtri Abitacolo DENSO rappresentano lo stato dell'arte della tecnologia di Primo Equipaggiamento e sono, quindi, in grado di risolvere in maniera estremamente efficace il problema dell'inquinamento nell'abitacolo. Essi vengono sottoposti a rigidi controlli di qualità in ogni fase produttiva. Ciò risulta non solo in un migliore confort di guida ma anche in una migliore protezione contro possibili pericoli per la salute.

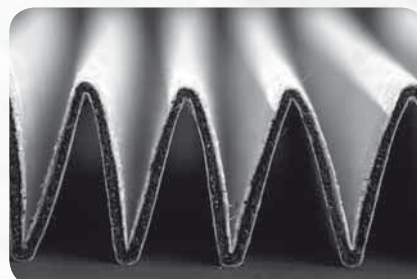

Tecnologia di qualità superiore

- La profonda conoscenza DENSO dei sistemi di riscaldamento, ventilazione e condizionamento si traduce in una tecnologia estremamente avanzata dei filtri, in grado di assicurare un ambiente più sano all'interno della vettura. Il tessuto che utilizziamo contiene 5 diversi strati che intrappolano quasi il 100% delle particelle e degli inquinanti nocivi, tenendoli lontano dall'interno della vettura in modo che non vengano respirati. Grazie ad accurati meccanismi, i filtri DENSO sono assicurati con precisione all'interno del loro alloggiamento, aumentando così l'efficienza di filtrazione. Il design innovativo protegge, inoltre, il sistema di riscaldamento, ventilazione e condizionamento, a tutto vantaggio della salute dei passeggeri e, in particolare, di quelli che soffrono di allergie e di asma.

Flusso dell'aria nella vettura

Cabin Air Filter

Tipologie di filtro

Filtri Particellari

I Filtri Particellari DENSO offrono un'eccezionale protezione contro polveri, fuliggine, polline e particelle. Caratterizzati da un materiale in tessuto non tessuto multistrato, che rimuove efficacemente la polvere e le particelle solide, sono estremamente efficienti nel trattenere la polvere e nel minimizzare la resistenza al flusso d'aria.

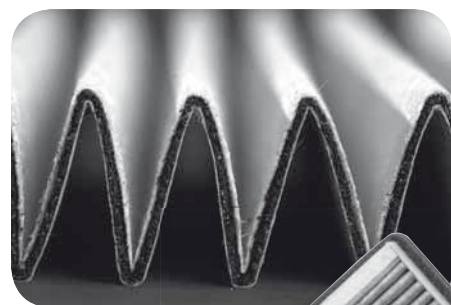

Filtri Particellari

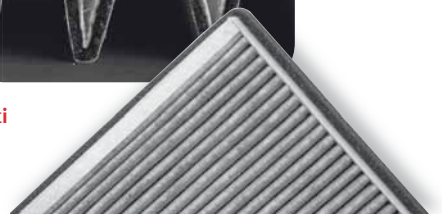

Filtri Combinati

I Filtri Combinati DENSO offrono tutte le tecnologie elettrostatiche, alle nanofibre e di intrappolamento che caratterizzano i nostri filtri particellari. Intrappolano circa il 100% delle polveri, del polline e delle particelle solide prima che queste vengano inalate. In più, grazie a un secondo strato ai carboni attivi, alloggiato all'interno del materiale di filtrazione, i Filtri Combinati offrono ulteriori vantaggi. Il risultato è un'aria all'interno dell'abitacolo fresca, piacevole e salubre.

Filtri Combinati

Come funzionano?

Filtri Particellari

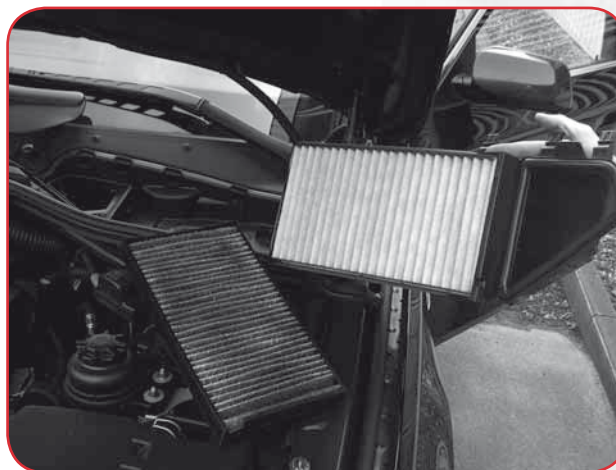

- Rimozione tramite intrappolamento – l'ingresso delle particelle nell'abitacolo è inibito da uno strato di tessuto non tessuto a fitte maglie. Le particelle così intrappolate vengono depositate nell'alloggiamento del filtro.
- Rimozione elettrostatica – le particelle più piccole con cariche permanenti o temporanee vengono attratte e trattenute grazie alla presenza di un campo elettrico.
- Rivestimento in nanofibre – Uno strato di fibre sottili viene intessuto nei mezzi filtranti, per prevenire cadute di pressione.

Filtri Combinati

- Oltre a non far passare polveri e particelle, eliminano gas e cattivi odori, spesso nocivi.
- Questo speciale strato ai carboni attivi assorbe i gas quali quelli generati da inquinamento chimico, e neutralizza odori da fertilizzanti o i fumi di motori diesel, impedendone l'ingresso nell'abitacolo.

Perché Sostituire

Sebbene la maggior parte dei nuovi veicoli sia già dotata di Filtro Abitacolo, questo nel tempo viene ostruito dalle polveri e dallo sporco che possono contenere batteri, muffe e micro-organismi. Ciò rende il filtro una fonte potenziale di allergeni e ne riduce la capacità filtrante e la carica elettrostatica. Tutto ciò potrebbe anche causare un'ulteriore perdita di pressione, sovraccaricando il sistema di riscaldamento, ventilazione e condizionamento.

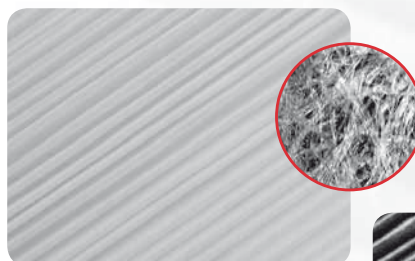

Il mercato della sostituzione

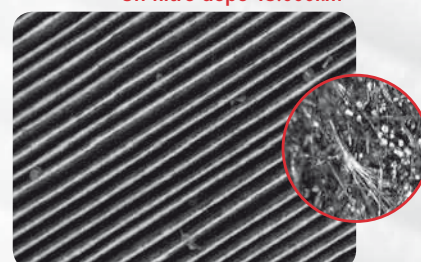

- Essere pronti alle richieste del mercato:** Più dell'80% del circolante europeo è già dotato di Filtro Abitacolo e il trend è in crescita. La capacità di poter effettuare tempestivamente le sostituzioni rappresenta, quindi, un mercato sempre più importante oltre che un impegno sempre più sentito per l'aftermarket.
- Educazione alla salute:** Gli automobilisti sono raramente consapevoli dell'importanza del cambio regolare del Filtro Abitacolo o delle conseguenze di un ritardo nella sostituzione. Dedica del tempo a responsabilizzare la tua clientela. Intervenire prontamente aiuterà l'automobilista a proteggere la sua salute e il benessere dei suoi passeggeri.
- In città e in campagna:** particelle solide, particelle, gas nocivi e cattivi odori sono presenti tanto in campagna quanto nelle aree urbane. La sostituzione del Filtro Abitacolo risulta quindi importante in ogni contesto.

Per assicurare una qualità elevata dell'aria all'interno della vettura, DENSO raccomanda la sostituzione dei Filtri Abitacolo una volta all'anno o ogni 10.000/15.000 km, o come da specifiche del costruttore del veicolo. Solo una sostituzione regolare del Filtro Abitacolo assicura un'efficienza di filtrazione continua e buone prestazioni del sistema di riscaldamento, ventilazione e condizionamento, a tutto vantaggio di un abitacolo più confortevole e più salutare.

Un filtro nuovo

Un filtro dopo 15.000km

Свежий воздух легко приходит с салонным фильтром DENSO.

Нашем ассортименте

Передвигаясь на автомобиле очень важно знать, что воздух, которым вы дышите, чистый и свежий. Чтобы устранить запахи, пыль и раздражающие вещества, вам нужен салонный фильтр, которым вы можете доверять.

• Оригинальное качество

Программа салонных фильтров DENSO предоставляет потребителям широкий ассортимент фильтров, разработанных и производимых по самому высокому стандарту из всех возможных – качеству Оригинального Оборудования (ОЕ), которое выбирают производители для своих машин.

• Ноу-хау ОБК

Будучи номером один в мире производителем систем Обогрева, Вентиляции и Кондиционирования (ОБК) и вторым по величине в мире брэндом среди автомобильных компонентов, DENSO четко понимает технологию салонных фильтров.

• Выбор

Созданная в соответствии со стандартами ОЕ программа салонных фильтров DENSO предлагает:

- 237 наименований
- более 750 применений
- 90% покрытия Европейского и азиатского парка автомобилей

• Технология пылевых и комбинированных фильтров.

Программа DENSO включает как пылевые, так и комбинированные фильтры. Наши многослойная системы фильтрации нейтрализуют выхлопные газы и другие раздражители, одновременно улавливая и удерживая пыльцу и частицы пыли, и гарантируя, что воздух, поступающий в кабину, чистый и безвредный для дыхания. Каждый тип фильтра разработан индивидуально под конкретный автомобиль. Более того, фильтры DENSO не вызывают падения давления, которое потенциально может повредить систему ОБК.

Предлагая выдающуюся защиту, качество, технологию и выбор, салонные фильтры DENSO дают лучшие ощущения от езды.

HVAC system

Лучше по конструкции

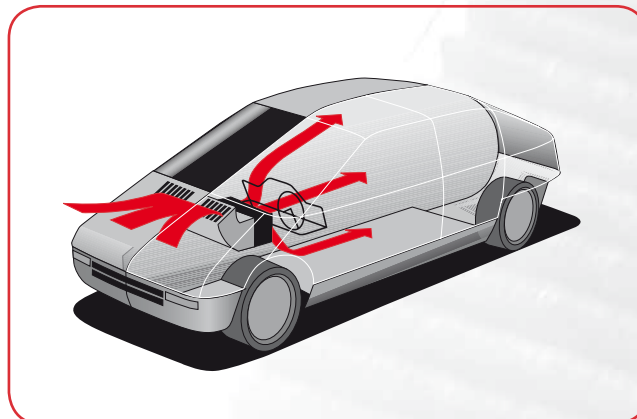

Значение качества

- Без эффективной очистки воздуха в салоне водитель и пассажиры могут подвергаться разнообразным опасным воздушным загрязнениям. Это могут быть пыль, сажа, пыльца растений, вредные газы и частицы, от износа тормозов и шин. Если их не устранить, они могут влиять на глаза, нос, легкие, вызывая проблемы со здоровьем, раздражение и дискомфорт.

- Так как салонные фильтры DENSO предлагают современное OE качество, они борются с проблемой загрязнений внутри салона чрезвычайно эффективно. Так же они подвергаются тщательному контролю на всех стадиях производства. Это означает не только более комфортабельное вождение, но лучшую защиту от угрозы здоровью.

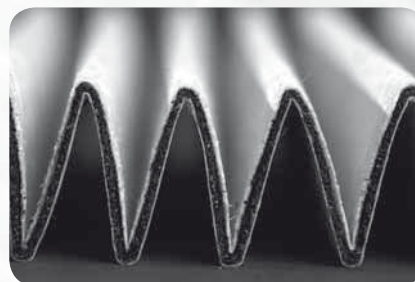

Превосходная технология

- То, что DENSO отлично разбирается в системах ОБК означает, что наши салонные фильтры обладают улучшенной технологией фильтрации для того, что бы обеспечить более здоровую среду в салоне. Ворсовый материал, который мы используем, содержит до пяти индивидуальных слоев, которые улавливают практически 100% вредных загрязнений и частиц, удерживая их от попадания в салон, где их можно было бы вдохнуть. Фильтры DENSO имеют чрезвычайно точный механизм уплотнения фильтра в корпусе, что повышает эффективность фильтрации. Их эффективная конструкция так же защищает систему ОБК, принося пользу здоровью каждого пассажира, и, в особенности, людям с аллергией и астмой.

Car Air-Flow

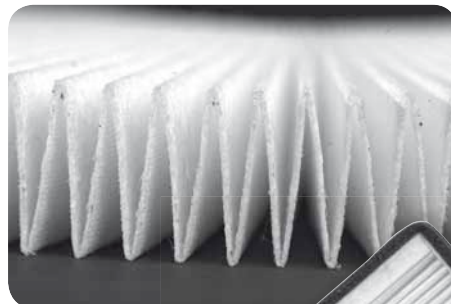

Cabin Air Filter

Типы фильтров

Фильтры частиц

Фильтры частиц от DENSO предлагают исключительную защиту от пыли, сажи, пыльцы и частиц. Используя многослойный ворсовый материал для эффективного задержания пыли и твердых веществ, они так же имеют большую удерживающую емкость и минимальное сопротивление потоку воздуха.

Фильтры частиц

Комбинированные фильтры

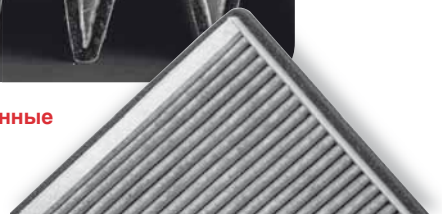

Комбинированные фильтры DENSO предлагают все блокирующие, электростатические и нанофибровые технологии наших фильтров частиц, улавливая практически 100% пыли, пыльцы и твердых частиц до того, как их, возможно, вдохнут.

Но благодаря дополнительному слою из активированного угля, расположенному внутри фильтрующего материала, наши комбинированные фильтры имеют дополнительное преимущество.

Результат заключается в том, что воздух в салоне всегда свежий, приятный и полезный для дыхания.

Комбинированные фильтры

Как они работают?

Фильтры частиц

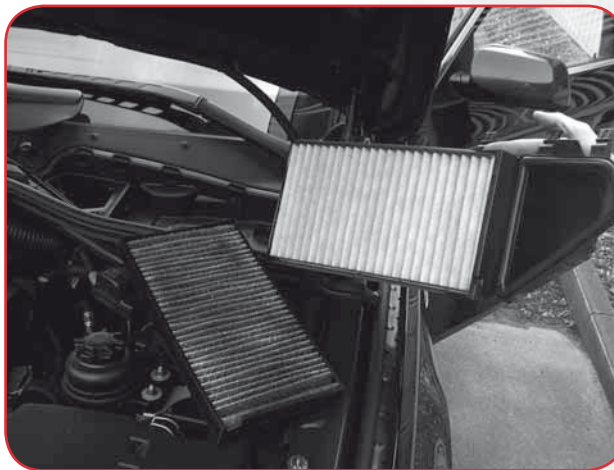

- Устранение путем задержания – частицам не дает пройти в салон плотно сцепленный нетканый фильтрующий слой. Частицы улавливаются и остаются в корпусе фильтра.
- Электростатическое устранение – малые частицы с постоянным или временным зарядами притягиваются и удерживаются из-за электростатического взаимодействия.
- Нанофибровые покрытия – слой тонких волокон вплетен в среду фильтра, предотвращая падение давления.

Комбинированные фильтры

- Они так же устраняют неприятные и, часто, вредные газы и запахи.
- Процесс абсорбции специальным угольным слоем гарантирует, что газы, такие как химические загрязнения и озон, так же как запахи, такие как навоз и выхлоп дизеля, эффективно нейтрализуются, не давая им достигнуть пассажиров в автомобиле.

Замена

Хотя большинство современных новых автомобилей уже имеют салонные фильтры, через некоторое время они засоряются пылью и грязью, которая может содержать бактерии, плесень и микроорганизмы. Это делает фильтр потенциальным источником аллергенов, а так же снижает эффективность фильтрации и электростатического заряда. Это так же может привести к падению давления, что нагружает систему ОВК.

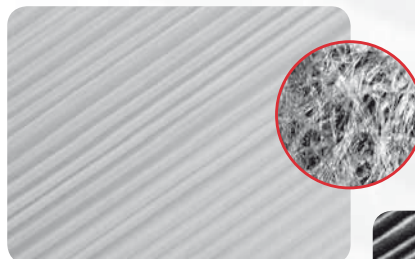

Смысл замены

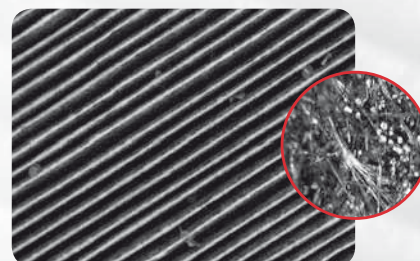

- **Будьте готовы к спросу** – более 80% европейских легковых автомобилей уже оборудованы салонным фильтром, и эта доля растет. Это делает своевременную замену чем дальше, тем более важной и объемной задачей афтемаркета.
- **Обучение здоровью** – водители редко бывают осведомлены о важности регулярной замены салонных фильтров или о последствиях поздней замены. Выделите время на то, что бы обучить Ваших клиентов. Своевременная акция поможет защитить их собственное здоровье и здоровье пассажиров.
- **В городе и в деревне** – Твердые вещества, частицы, вредные газы и неприятные запахи наносят вред как в городе так и за городом, делая замену салонного фильтра важной в любой среде.

Чтобы поддерживать чистую, безопасную атмосферу в салоне, DENSO рекомендует заменять салонный фильтр по меньшей мере один раз в год, каждые 10-15 тысяч километров или как указывает производитель автомобиля. Только регулярная замена гарантирует постоянную эффективность фильтрации и высокую отдачу системы ОВК и обеспечивает более гигиеничную и комфортабельную среду в салоне.

Cross Reference Chart

GB**Caution**

This Chart should only be used when your vehicle is NOT listed in the Application Table pages of this Catalogue.

DE**Achtung**

Diese Tabelle sollte nur verwendet werden, wenn Ihr Fahrzeug NICHT in den Anwendungstabellen dieses Kataloges aufgelistet sein sollte.

FR**Attention**

Ce tableau ne peut être utilisé que lorsque votre véhicule ne figure PAS dans la liste du tableau d'application de ce catalogue.

ES**Advertencia**

Este gráfico sólo debe utilizarse si su vehículo NO aparece en las páginas con listas de aplicaciones de este Catálogo.

IT**Attenzione**

Questa tabella dovrebbe essere utilizzata solamente se il vostro veicolo NON è elencato nella Tabella di Applicazione di questo Catalogo.

SE**Observera**

Denna tabell ska endast användas om ditt fordon INTE står med i tillämpningstabellen i denna katalog.

RU**Предупреждение**

Данная таблица должна использоваться только в случае, если Ваш автомобиль НЕ указан

на страницах Таблицы применения данного каталога.
